

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Cancelled)
2. (Cancelled)
3. (Currently Amended) Device (30) ~~according to Claim 1,~~ for swinging a wiper arm of a windshield wiper device away from and against a motor vehicle window, the device comprising at least two spring elements, which retain the wiper arm in a stable position away from the vehicle window and press the wiper arm against said vehicle window during the operation of the wipers, wherein at least one of the at least two spring elements comprises at least one compressed region, characterized in that it comprises three spring elements (31, 32) arranged next to one another, wherein a center spring element (32) is provided with at least one compressed end region (35).
4. (Currently Amended) Device (50) ~~according to Claim 1,~~ for swinging a wiper arm of a windshield wiper device away from and against a motor vehicle window, the device comprising at least two spring elements, which retain the wiper arm in a stable position away from the vehicle window and press the wiper arm against said vehicle window during the operation of the wipers, wherein at least one of the at least two spring elements comprises at least one compressed region, characterized in that it comprises three spring elements (51, 52) arranged next to one another, wherein two externally arranged spring elements (51) are provided with at least one compressed end region (55).
5. (Currently Amended) Device (10, 30, 50) according to ~~Claim 1~~ Claim 3, characterized in that it can be manufactured from sheet metal with a constant cross section.

6. (Currently Amended) Device (~~10, 30, 50~~) according to ~~Claim 4~~ Claim 3, characterized in that it can be manufactured automatically.
7. (Cancelled)
8. (Cancelled)
9. (Currently Amended) Wiper arm according to ~~Claim 7~~, for a windshield wiper device of a motor vehicle, comprising a device for swinging the wiper arm away from and against a window of the motor vehicle, wherein the device comprises at least two spring elements, which retain the wiper arm in a stable position away from the vehicle window and press the wiper arm against said vehicle window during the operation of the wipers, wherein at least one of the at least two spring elements comprises at least one compressed region, characterized in that the device (30) comprises three spring elements (31, 32) arranged next to one another, wherein a center spring element (32) is provided with at least one compressed end region (35).
10. (Currently Amended) Wiper arm according to ~~Claim 7~~, for a windshield wiper device of a motor vehicle, comprising a device for swinging the wiper arm away from and against a window of the motor vehicle, wherein the device comprises at least two spring elements, which retain the wiper arm in a stable position away from the vehicle window and press the wiper arm against said vehicle window during the operation of the wipers, wherein at least one of the at least two spring elements comprises at least one compressed region, characterized in that the device (50) comprises three spring elements (51, 52) arranged next to one another, wherein two externally arranged spring elements (51) are provided with at least one compressed end region (55).
11. (Currently Amended) Wiper arm according to ~~Claim 7~~ Claim 9, characterized in that the device (~~10, 30, 50~~) can be manufactured from sheet metal with a constant cross section.

12. (Currently Amended) Wiper arm according to ~~Claim 7~~ Claim 9, characterized in that the device (~~10, 30, 50~~) can be manufactured automatically.
13. (Cancelled)
14. (Cancelled)
15. (Currently Amended) Windshield wiper according to ~~Claim 13~~, for a motor vehicle, comprising at least one wiper arm with a device for swinging the wiper arm away from and against a window of the motor vehicle, wherein the device comprises at least two spring elements, which retain the wiper arm in a stable position away from the vehicle window and press the wiper arm against said vehicle window during the operation of the wipers, characterized in that at least one of the at least two spring elements comprises at least one compressed region, characterized in that the device (30) comprises three spring elements (31, 32) arranged next to one another, wherein a center spring element (32) is provided with at least one compressed end region (35).
16. (Currently Amended) Windshield wiper according to ~~Claim 13~~, for a motor vehicle, comprising at least one wiper arm with a device for swinging the wiper arm away from and against a window of the motor vehicle, wherein the device comprises at least two spring elements, which retain the wiper arm in a stable position away from the vehicle window and press the wiper arm against said vehicle window during the operation of the wipers, characterized in that at least one of the at least two spring elements comprises at least one compressed region, characterized in that the device (50) comprises three spring elements (51, 52) arranged next to one another, wherein two externally arranged spring elements (51) are provided with at least one compressed end region (55).
17. (Currently Amended) Windshield wiper according to ~~Claim 13~~ Claim 15, characterized in that the device (~~40, 30, 50~~) can be manufactured from sheet metal with a constant cross section.

18. (Currently Amended) Windshield wiper according to ~~Claim 13~~ Claim 15, characterized in that the device (~~10, 30, 50~~) can be manufactured automatically.
19. (New) Device according to Claim 4, characterized in that it can be manufactured from sheet metal with a constant cross section.
20. (New) Device according to Claim 4, characterized in that it can be manufactured automatically.
21. (New) Wiper arm according to Claim 10, characterized in that the device can be manufactured from sheet metal with a constant cross section.
22. (New) Wiper arm according to Claim 10, characterized in that the device can be manufactured automatically.
23. (New) Windshield wiper according to Claim 16, characterized in that the device can be manufactured from sheet metal with a constant cross section.
24. (New) Windshield wiper according to Claim 16, characterized in that the device can be manufactured automatically.
